Attn: Larrell Willis, Owner, President

Dear Mr. Willis,

I am writing this letter to give my experience using your QMI PTFE treatments. I have been using QMI products for four years with excellent results.

I have been in the trucking industry for over thirty years and am very excited about the benefits that QMI products provide for my customers.

I used QMI PTFE treatments in my own trucks and am now presently recommending QMI treatments to my customers. In addition to fuel savings, the most dramatic benefit is in temperature reduction. Heat caused by friction is the number one problem in maintenance cost and QMI Engine Treatment and QMI Gear Treatment reduces temperatures drastically in engines, transmissions, and rear ends.

One example of temperature reduction was in a RTO 14 614 transmission running hot at 300°F. After treating the transmission, the temperature dropped over 75°F. In Eaton & Rockwell rear ends and transmissions we often see 40°F to 60°F drops in temperatures.

My personal use of QMI has resulted in fuel savings of 3/4 to 1 1/2 miles per gallon in both Cummins and Cat engines. I have also used QMI products in Thermo King units with excellent results.

In my thirty years of experience, I have never been so impressed as I am with QMI PTFE treatments. Also QMI Fuel Treatment is great, especially as a water scavenger.

Best regards,

Tommy Robbins
Service Manager
